

Tired of “Wrong Format” Errors?

GPX, KML, TCX, FIT, GeoJSON, KMZ, CSV —
open them all on your phone. No desktop needed.
Select multiple files at once and go.

It Just Works — From Any App

Get a track file in email, Drive, or a file manager?
Tap it. **GpxAnalyzer opens automatically.**
Built into Android’s “Open with” — no extra steps.

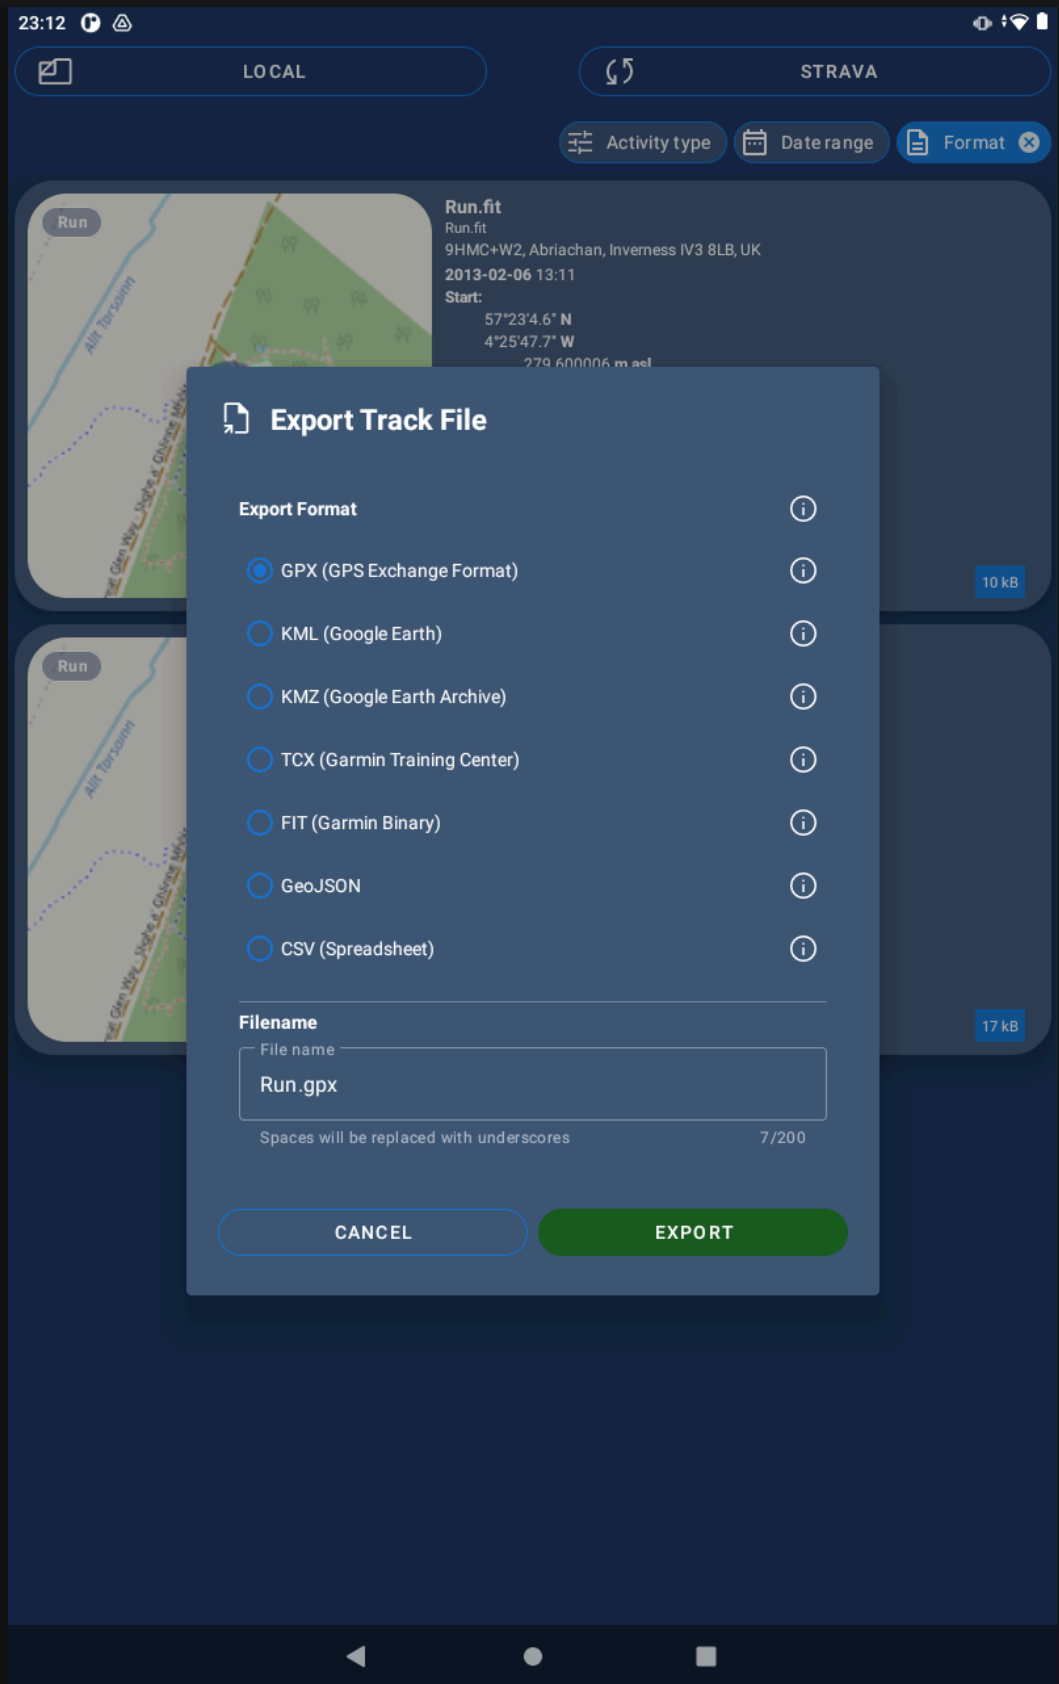

Dozens of Files, Zero Confusion

Garmin exports mixed with Strava downloads?

One tap — filter by format or activity type.

The app **remembers your choices** next time you open it.

Convert to Any Format in Seconds

Pick your file. Pick your target. **Done.**
Heart rate, cadence, power — all mapped automatically.
The app remembers your last export choice.

Format Compatibility

Shows which data fields are preserved when converting between formats. KMZ has the same compatibility as KML.

Key Data Loss Paths

- **Activity Type** — TCX only supports Running, Biking, Other
- **Waypoints** — only preserved in GPX, KML, and GeoJSON
- **Routes** — only preserved in GPX
- **Metadata** — fully preserved only in GPX; name only in KML/GeoJSON
- **Temperature** — TCX only supports 6 of 18 sensor fields (speed, HR, cadence, power, distance + watts)
- **Temperature** — FIT temperature is integer only (fractional part truncated)

OK

Convert with Confidence, Not Guesswork

Every format has limits. **You'll know them upfront.**

Waypoints, routes, metadata — the app shows **what stays and what doesn't** before you tap Export.
